

Hybrid Infrastructure Platform (HIP)

The Ultimate Power Solution

Motive’s innovative, emissions-cutting, Hybrid Infrastructure Platform “HIP” is the “Swiss Army Knife” of site power solutions. It is constantly being improved to solve a myriad of customer requirements. Improvements include full remote site monitoring and control, UL142 optional extended run fuel tank, and solar array for early telco with both AC and DC outputs. The HIP has a modular design that can be expanded to support future network growth without the need to modify the environmental and power infrastructure. Offered with an attractive lease, rental, or purchase, the HIP is the right choice for you to get your site up and running fast.

SUPPORT

- 250A @ -48VDC
