

# Lite Site Mobile & Temporary-to-Permanent Tower Structures

Lite Sites are patented, ballast-mounted monopoles that require no ground penetration — avoiding the need for excessive environmental mitigation. Lite Sites are complete sites, capable of supporting full arrays without stabilizing guy wires. The result is greatly reduced lease space and installation time — up in just a matter of hours. Deployments with this system are deadline “buzzer beaters” and installations can be temporary or permanent. The deck space of the ballast is often utilized by our customers to house their BTS and telco equipment. When combined with the full site power from a HIP or Solar HIP, the site can be fully operational prior to commercial power delivery. Lite Sites can be purchased, rented, or leased, and are perfect for festival, events, demo/relays, and other rapid deployment situations.

## SUPPORT

- Temporary or Permanent
- Portable and Reusable
- 10', 15', 20' Square Size Options
- Small Footprint and Lease Space with No Guy Wires
- Support Real Monopoles up to 150'
- Single and Multiple Carriers
- RF Engineer Friendly Supporting Full Antenna Arrays
- Optional Security Fence & Step Kit
